## Laboratory of testing of electric drives

*The testing laboratory for electric drives is intended for measuring, verifying and testing operational electromechanical characteristics of electric drives, specifically medium and high power electric rotating machines, but also other electronic and electromechanical devices. The laboratory is ready with its equipment to cover the needs of research, development and testing in the field of electric motors of new concepts, in the field of power electronics as well as in the field of electric drives for hybrid and electric vehicles for passenger transport but also for commercial vehicles.*
